

ABSTRACT

This research is a report of the results of one survey carried out in specified Villages in Princes Town. This study was aimed at profiling Single Parents in Princes Town. The end product is expected to provide a better understanding of the dynamics of Single Parenthood. The findings can be used to compare other studies across Trinidad and Tobago and/or the wider Caribbean region. The survey was conducted with Single Parents in St. Julien, Madingo Road, Lengua and Maingot Road/Petite Cafe using a non-probability sample size of fifty (50). The results obtained were categorised according to the study's objectives.
