(1) A series of preliminary trials have been carried out using the chemical M.C.P.B. (2 - 2 methyl 4 chloro phenoxy butyric acid) both pre- and post-emergence to determine the tolerance of a range of tropical crops.

(2) Determination of the tolerance of various crops to:

(a) 2 chloro NN diethyl acetamide, 
and 
(b) 2 chloro allyl diethyl di thio-carbamate.

(3) Tolerance of certain arable weeds to the above chemicals was studied.
