

ABSTRACT

A COMPUTER BASED MAINTENANCE MANAGEMENT SYSTEM

FOR PLANT AND EQUIPMENT

IN

HOSPITALS

JINDA MAHARAJ

This Project examines the underlying principles and considerations used in the development of Maintenance Management Systems and applies them to the special case of a Hospital.

The Project further explores the need for the case of electronic data processing as an aid in information processing and goes on to select a complete package which can be used for a facility such as the Mt. Hope Medical Complex of Trinidad and Tobago.
