

List of Figures, Tables, Illustrations and Charts

FIGURES

FIGURES	PAGE NUMBER
CASE 1	
Figure 1: X-ray of the index case showing pneumomediastinum (1) and subcutaneous emphysema (2)	3
Figure 2: ALGORITHM FOR DIAGNOSIS AND MANAGEMENT OF SPONTANEOUS PNEUMOMEDIASTIUM (6).....	10
CASE 2	
Figure 1: CT BRAIN SHOWING AGE RELATED INVOLUTIONARY CHANGES (1), AND PERIVENTRICULAR HYPO DENSITIES (2).....	17
Figure 2: American Heart Association Stroke Algorithm (Reproduced Courtesy AHA- ACLS provider manual 2010 (5).....	21
Figure 3: AHA inclusion and exclusion criteria for fibrinolysis treatment (Reproduced Courtesy AHA- ACLS provider manual 2010 (5).....	22
CASE 3	
Figure 1: Initial AP AND Lateral films of the wrist of the index case	31
Figure 2: LATERAL FILM SHOWING DISLOCATION AND ALMOST 90° OF Volar ROTATION OF KUNATE (RED) AND ITS RELATION TO THE CAPITATE (GREEN WITH WHICH IT IS SUPPOSED TO ARTICULATE. Fragments of the triquetrum are shown in yellow	32
Figure 3: AP view showing an intact hook of hamate (red circle), as well as an intact pisiform (green circle). Fragments of the triquetrum are shown in yellow.	32
Figure 4: Lesser arc injuries affect the perilunate ligaments (red line), and greater arc injuries affect transcarpal bony structures (blue line).....	34
Figure 5: The Mayfield classification of perilunate ligament injury (2).....	35
Figure 6: Watsons [scaphoid shift] test. (Buckup 2004, p. 123)(7).	38
Figure 7: Regan (triquetrolunate ballottement) test. (Buckup 2004, p. 124) (7).....	39
Figure 8: Proper PA view of the wrist.....	40

Figure 9: Proper lateral wrist X-ray showing consecutive Cs, a capitulate angle of between 10 to 20 degrees, a scapholunate angle of between 30 to 60 degrees and radial volar tilt of 10 to 15 degrees. (Emergency Medicine 2004, p. 1676)(10).....	41
--	----

CASE 4

Figure 1: CT of the brain showing areas of air within the cranial vault (red circles), and the Mount Fuji Sign (irregular red frontal outline).....	46
---	----

Figure 2: CT scan showing cavum septum pellucidum (yellow arrow).....	46
---	----

Figure 3: CT scan showing fractures through right periorbital area and greater wing of the sphenoid (red arrows).....	47
---	----

CASE 5

Figure 1: Initial ECG done for patient, within ten minutes.....	73
---	----

Figure 2: ECG following the second cardioversion.....	75
---	----

Figure 3: The American Heart Association guidelines for acute management of stable tachycardia, including stable ventricular tachycardia (1).....	77
---	----

CASE 6

Figure 1: ECG of presenting patient showing low voltage of tracing.....	88
---	----

Figure 2: Ultrasound image of the patient, showing moderate pericardial effusion.	89
--	----

Figure 3: The Ultrasound room of the Eric Williams Medical Sciences Complex Emergency Department.....	98
---	----

Figure 4: The Ultrasonography Suite of the Eric Williams Medical Sciences Complex.....	100
--	-----

CASE 7

Figure 1: CT scan showing subdural hematoma with midline shift, as well as frontal skull fracture.....	109
--	-----

CASE 8

Figure 1: The coagulation cascade (TPL - thrombolastin, TFL - tissue factor inhibitor)(4).	126
---	-----

Figure 2: The fibrinolytic system (4).	127
---	-----
