

ABSTRACT

User Management Module for Burrokeet – A Learning Content Creation Environment

Wazir Abdool

There exist many Learning Content Management Tools for creating and delivering learning content. However, many of these tools lack the functionality to deliver content in a unified format. Hence, Burrokeet was developed to assist the content author in focusing on the quality of the content and not worry about the delivery format. Presently, Burrokeet is used to create and edit content packages but there is no mechanism in place to manage its users. Instead, Burrokeet relies on other standards compliant Learning Content Management Systems to manage its users. This report describes the design and implementations of the User Management System for Burrokeet to make it one step closer to becoming a complete Learning Content Management System. It also discusses a practical approach in overcoming implementation challenges.
