

ABSTARCT

This study entails documenting the technologies and entrepreneurship of 12 farmers in the Penal/Siparia area.

The study was intended to meet the requirements of AM311 and was supervised by Dr. Carlile Pemberton. The study took approximately three months to be completed. It entailed discovering the different types of technologies that were used in hot pepper production within the area. It also entailed discovering which farmers were more profitable and comparisons were made of the most profitable farmer in order to find out what entrepreneurial skill made him most profitable.

It was evaluated that the farmer who made the most profits invested the most in his farm.
