

TITLE: Assess the needs of the physics graduate in the workplace.
AUTHOR: Jovan Labban
SUPERVISOR: Dr. Shirin Haque

The research conducted in this project was geared toward studying the needs of the physics graduate in the world of work and employment, and how well the Department of Physics was filling this need. This was done by conducting a survey by distributing questionnaires to both past and present students, as well as conducting interviews. The results and responses to the questionnaires and interviews were studied and used to evaluate and assess the participants' opinions of the physics programme, the availability of physics oriented jobs, the application of physics to certain jobs, and how the physics department can revamp its programmes to improve the graduates' preparation and marketability in the workplace.
